

What is Swing Bed Care?

When patients reach the point in their recovery that acute care is no longer necessary, but they are not yet ready to leave the hospital, they can be evaluated for this special program that provides skilled follow-up care.

Swing Bed care is a wonderful option that is particularly helpful whenever a patient needs only a few more days or weeks in order to reach their optimal recovery. Even if the original hospitalization occurred elsewhere, patients may still qualify for our program at Scheurer Hospital.
